

Section 16 - Social work

Note: In view of the continuing development of the indicators for social work services, many of the indicators contained in this section may be considered to contain 'transitional' elements in accordance with the developed criteria (see Section 1). However, none have specifically been identified as 'transitional'.

Community care

- 1. The number of people assessed or reviewed and the number receiving a service expressed as a rate per 1,000 relevant population in the seven main groups of adult users of community care services:**
 - elderly people (aged 65+)
 - elderly people (aged 65+) with dementia
 - people (aged 18-64) with mental health problems
 - people (aged 18-64) with physical disabilities
 - people (aged 18-64) with learning disabilities
 - people (aged 18-64) with HIV or AIDS
 - people (aged 18-64) with drug or alcohol abuse problems.

What the indicator reports

The indicator reports:

- the number of assessments and reviews carried out
- the number of people who received a service.

Assessment and review are the key activities in social work. Their purpose is to identify the need, if any, that a person has for social care. The council is responsible for ensuring that assessments are carried out. Assessments are usually undertaken by social workers or other social work department staff such as occupational therapists, but they may also be carried out, wholly or in part, by the staff of other care agencies.

When a person has been found to have need for a service or services following an assessment or a review, the council attempts to provide the services required.

Points to bear in mind

The information on the number of assessments or reviews undertaken shows the scale of the task facing each council, and so it is contextual rather than performance-related information. It will be affected by:

- the particular patterns of need for social care in the council's area
- the number of requests for assessment received ('referrals').

The indicator should not be affected by the resources available to meet those needs. Central government guidance requires that all the needs for each person should be considered, even if the council does not have enough resources to provide a service to meet some or all of these needs.

The council may not always be able to provide the service because:

- the user has expressed a preference for a particular service and there is a waiting time for that service
- there is a delay in providing the service because of a lack of resources. This may mean that no service will be available, or that there may be a waiting time.

The provision of a service or services to a person is reported only when it is actually delivered. As a result, there will be some people who were assessed as needing a service who had not yet received it at the end of the reporting period (31 March 1998).

Spending on clients

2. Expenditure on services for adults in community care client groups:

- home and community based services
- long-term residential and nursing home care.

What the indicator reports

The indicator shows how expenditure on community care client groups is distributed between home and community based services and long-term residential and nursing home services. It is expressed as cost per head of the population aged 18 and over. This information will enable councils to monitor the implementation of community care policy in relation to changes in the balance of care.

Home and community based services include:

- home care
- meals on wheels
- equipment and adaptations
- direct payments
- other domiciliary services
- day care
- lunch clubs
- community alarms
- supported accommodation
- wardens for sheltered housing
- respite care in residential and nursing homes
- other respite care

Points to bear in mind

The indicator will be affected by:

- the pattern of need within the council area, influenced by the age-structure of the adult population, the distribution of poverty and ill health, household composition, and other factors
- the level of services provided by the NHS and other providers
- the extent to which councils already have high proportions of expenditure on home and community based services, which may limit the potential for further shifts in expenditure

Child protection

3. Information on the following aspects of child protection:
- a) the number of children referred over the 12 months to 31 March
 - b) the percentage of children entered on the register in the year who had previously been on the register
 - c) the total number of children on the child protection register at the end of the reporting year (31 March)
 - d) the number of children on the child protection register at 31 March per 1,000 population aged under 16 years
 - e) the percentage of children on the register at 31 March who had been on the register for:
 - (i) less than six months
 - (ii) six months but under one year
 - (iii) one year but under two years
 - (iv) two years or more

What the indicator reports

Child protection is an important responsibility for councils. It involves keeping a record, the 'child protection register', of children who are known to have been abused, or are suspected of being at risk of abuse. Abuse may involve physical or sexual abuse, or neglect.

A referral is when the council is notified of the possible or suspected abuse of a child, so that it can investigate the circumstances.

It is recognised by councils as good practice that a child's name should not remain on the child protection register any longer than is necessary. Some children may require a long registration, but the extent to which a high proportion of children remain on the register for long periods raises questions about whether a council is resolving the underlying risks which led to registration.

A very high or very low number of children on the child protection register per 1,000 population compared with other authorities is as likely to reflect differences in child protection, registration and de-registration policy and procedures, as it is to reflect differences in the prevalence of child abuse, and therefore may indicate that current policy and practice should be reviewed.

Points to bear in mind

The indicator will be affected by:

- the volume of referrals received
- the level of awareness (eg by social work staff, teachers, relatives, neighbours) of child abuse and its identification
- protection and registration and de-registration policy and procedures. The criteria for registration and de-registration are largely but not wholly standardised across Scotland, and professional practice may vary between councils.

Not all referrals will result in a child's name being added to the register.

The first two items of the indicator provide information on the scale of the child protection work undertaken by each council. Since this information is contextual, it should not be used to make direct comparisons between councils.

Child care placements

4. **The number and percentage of children being looked after by the council, and also expressed as a rate per 1,000 population aged 0 – 17 years:**
- **at home**
 - **in other community placements**
 - **in residential accommodation**
 - **children under 12 in residential accommodation**
 - **total children aged under 12 looked after, excluding respite**
 - **children receiving respite care excluding those in the above categories.**

What the indicator reports

This indicator reports the extent to which councils have been able to arrange placements for children at home or in the community, as contrasted with residential placements.

It also reports the number of children being looked after expressed as a rate per 1,000 population of young people aged 0 – 17 years within the council's area, and within this group the number of children under 12, excluding those receiving respite care that are looked after.

The indicator also reports all other children not included in any of the other categories who receive respite care.

'At home' means the child is under supervision by the council and living at home with parent(s) or guardian(s).

'Other community placements' comprise placements with relatives or friends, with foster parents, with prospective adopters, or in private lodgings.

'Residential accommodation' comprises children's homes, secure units, residential schools, special schools, assessment centres, hospitals, hostels and other forms of residential accommodation.

Points to bear in mind

The factors most likely to affect the placing of children are:

- the success of the council in supporting parents and guardians of children supervised at home
- the extent to which councils have been able to identify, develop and support a range of other community placements
- the types of care needed by the children for whom the council was responsible.
Community placements are not always appropriate. Residential care may be more suitable in certain cases, based on an assessment of the best interests of the child
- the council's policies - for example, the number of children's homes and other residential places which the council considers it desirable to retain (or to use, where these are not run by the council).

Generally, councils are successful in finding community placements where appropriate, particularly for younger children. Those children remaining in residential care tend to be adolescents and are more difficult to place in the community.

Looked after children – academic attainment

5. The number and percentage of young people of age 16 or 17, ceasing to be looked after away from home, who achieved Standard Grades in English and Maths or other subjects:

- a) **Number and % of those discharged attaining at least one Standard Grade (any subject)**
- b) **Number and % of those discharged attaining Standard Grade English and Maths**

What the indicator reports

This indicator reflects how well local authorities meet the targets established by the Scottish Executive and provide for the educational needs of young people in their care who are looked after away from home.

This indicator refers only to those young people who ceased to be cared for during the year who were 16 or 17 years of age.

Points to bear in mind

The Standard Grades refer to all levels from 1 to 6 as per the Scottish Qualification Authority examinations structure.

The Scottish Executive has established a target that for the educational attainment of young people leaving care where they identify that young people should have achieved both English and Maths at standard grade.

Home care/Home helps

6. The level and flexibility of service to home care clients receiving the following level of service:

- **less than 2 hours of care per week**
- **at least 2 but less than 4 hours of care per week**
- **4 to 10 hours of care per week**
- **more than 10 hours of care per week**
- **the total number of hours per week provided**
- **total number receiving personal care**
- **total receiving care at week-ends**
- **total receiving care in evenings/overnight**
- **the total numbers of hours per week provided expressed as a rate per 1,000 population aged 65 years and over.**

What the indicator reports

Home care is one of the most important services available to local authorities to support people with community care needs to remain at home. The indicator measures the overall volume of services, in terms of both the total number of clients and the total number of home care hours provided or purchased.

The indicator measures flexibility in terms of:

- the number of people who received home care, grouped in four bands according to the number of hours of care received each week and the rate expressed as a rate per 1,000 population aged 65 and over
- the total number of hours of care provided by the council, regardless from whom the council purchased the home care, and the rate expressed per 1,000 population of elderly people aged 65 years and over

Social work

- the extent to which care is provided outwith normal working hours to meet clients' needs
- the extent to which personal care is provided, in addition to help with domestic tasks

Points to bear in mind

The indicator provides information on the amount of care provided to people in their own homes, but not the nature of the care. The precise help given may vary among councils.

The indicator will be affected by:

- the pattern of need and demand within the council area, influenced by the age-structure of the elderly population, the distribution of poverty and ill health, household composition, and other factors
- the particular needs of people who receive the service
- the balance between home-based and residential care services in the council area.

This indicator shows whether the service is targeted towards more dependent people who are likely to require a high level of service as an alternative to residential care, or is spread among more people receiving less hours per week where the service may have a more preventative character. A council that concentrates the service on fewer clients is not necessarily performing more successfully than one which provided less service to more clients.

is affected by the overall level of demand and the particular needs of people who receive the service. Both of these will change over time.

While most who receive the service are elderly, a small minority (just over 10% in most councils) will be under pensionable age, since the service is provided on the basis of need rather than age.

Some councils may have a policy of providing at least some service to a large number of people, with the result that each person may receive a relatively small number of hours. Other councils may concentrate the service more, giving a greater number of hours to a smaller number of people.

Staff qualification

- 7. The percentage of care staff in residential homes who have appropriate qualifications in**
- (i) social work, social care and other specified qualifications or**
 - (ii) other relevant qualifications,**

For the following user groups:

- **children**
- **elderly people**
- **other adults.**

What the indicator reports

This indicator reports an aspect of the quality of residential care for the specified user groups. The extent to which care staff have appropriate qualifications is only one of a large number of factors which contribute to the quality of residential care, but it is significant. The indicator reports two categories of qualifications. Both categories report qualifications

Social work

appropriate for care staff, however, qualifications which fall under the general heading of 'social work, social care and other specified qualifications' would be the preferred choice of employers or regulatory bodies.

'Other adults' includes people who have physical disabilities or sensory impairments, people who are recovering from mental illness, and people who have learning difficulties.

Points to bear in mind

The indicator will be affected by:

- the policies of councils on recruiting staff who are suitably qualified, and on training existing staff
- the availability of suitably qualified staff.

The indicator relates only to staff in residential homes managed by councils. Voluntary and private sector homes are not included.

Privacy in residential accommodation

8. **The number of single rooms and the number of rooms with en-suite facilities, expressed as a percentage of all residential care places provided by councils, the voluntary sector and the private sector, for the following groups:**
- children
 - elderly people
 - other adults.

What the indicator reports

Research on the preferences of residents in residential establishments shows that privacy is of particular importance. Therefore, the indicator measures this particular aspect of the quality of the residential care.

The indicator is based on the number of bedrooms intended solely for one person, and excludes rooms which have two or more beds but are used by only one person.

En-suite facilities will have as a minimum a shower or bath in the apartment for the sole use of the resident, but it should be recognised that many homes, but not all, will provide a higher standard than this.

Points to bear in mind

The indicator is likely to be affected by:

- limitations in the resources available to councils and the owners of homes in the voluntary and private sectors to improve homes by increasing the number of single rooms
- the physical layout of an existing home, which may limit the scope for creating single rooms
- design standards for new homes which encourage greater provision of single rooms
- the registration standards established by councils' independent inspection units, which may include a requirement for single rooms
- it is desirable for councils to retain some double rooms to accommodate married or cohabiting couples or young siblings.

Inspection of residential establishments

9. **The average number of inspections per year of council, voluntary sector and private sector residential homes, for children, elderly people and other adults. The number and percentage of homes inspected less than twice, and the total number of homes for each sector.**

What the indicator reports

Councils are responsible for carrying out independent inspections of all residential care homes in their area, including their own and those run by the private and voluntary sectors. The purpose of inspections is to establish whether each home meets the standards of care required for each client group. These standards include the physical condition of the home and the personal care of residents. Scottish Executive guidance suggests that a target of two inspections a year for each home is appropriate. This target is accepted by councils.

The indicator shows the extent to which each council has met the target set by The Scottish Executive.

Points to bear in mind

The intended frequency of inspections will be determined by councils in the light of the guidance by The Scottish Executive.

The actual rate of inspection will be affected by:

- the number of homes to be inspected
- the extent and detail of inspection work undertaken.

The indicator makes no distinction between announced and unannounced inspections.

Respite care

10. The number of people receiving respite care, the number per 1,000 population and the volumes of respite care provided or purchased, for people in the following client groups:

- elderly people
- adults with learning disabilities
- children with disabilities.

The number of people receiving respite care expressed as a rate per 1,000 relevant population.

The total volume of respite care provided or purchased expressed in terms of bed-nights and/or hours.

What the indicator reports

Respite care is a support for the carer(s) of vulnerable individuals, supplying temporary relief from the responsibility of providing care, by the provision of alternative care. Often the purpose of respite care is to prevent a breakdown in care in the household, which results in the person having to be admitted to permanent care. Respite care may, therefore, be provided on a planned or an emergency basis. The indicator provides information in relation to three of the main user groups.

Respite care can take various forms, such as admission to residential care for the vulnerable person, 'sitter' services, 'share-the-care' and 'breaks-and-opportunities' schemes.

Although the information set out below is expressed in terms of the number of assessments of vulnerable people, the assessment is, in fact, as much about the needs of the carers of those people as about the needs of the people themselves.

The number of bed-nights and hours provided or purchased provides a measure of the total volume of respite care provided or purchased and comparison can be made between the level of provision amongst councils.

Points to bear in mind

The indicator will be affected primarily by:

- the volume of requests for assessment for respite care and the pattern of services required
- the availability of respite care
- the priority given by the council to the development of respite care.

The indicator does not take account of the nature of the service provided or the number of episodes of respite care which a person may have received.

The information on the number of people who have been assessed is contextual, and should not be used to make direct comparisons between councils.

Social enquiry reports

11. **The number of social enquiry reports submitted to courts during the year and the number expressed as a rate per 1,000 adult population**

The proportion of reports requested by courts allocated to social work staff with two working days of receipt by the social work department and the proportion of reports submitted by the due date

What the indicator reports

The first part of this indicator provides information about the volume of social enquiry work undertaken, while the second part measures the efficiency of the service provided in terms of the proportion of cases which meet the timescales for the key social work actions set out in the '*National Objectives and Standards for Social Work in the Criminal Justice System*'.

Points to bear in mind

All Social Enquiry Reports submitted to courts during the reporting year, including pre-trial reports are included.

Probation

12. **The number of new probation orders issued during the year and the number expressed as rate per 1,000 population**

The proportion of new probationers seen by a supervising officer within one week, and the proportion of people subject to a probation order who were reported to the court for breach of probation during the year.

What the indicator reports

The first part of this indicator provides information about the volume of probation work undertaken, while the second part measures the efficiency of the service, however, the proportion of probationers seen within a week of the order being named will be adversely affected by probationers not attending scheduled appointments and by late notifications of Orders by the courts.

Points to bear in mind

High breach levels do not necessarily indicate poor performance. It may mean that the service is not able to encourage offenders on supervision to comply with the terms of the probation order or alternatively, that the strictness with which the probation service follows breach protocols.

Community service

13. The number of new community service orders issued during the year and the number expressed as rate per 1,000 population

The average length of community service for orders completed during the year and the average number of days taken to complete orders.

proportion of new probationers seen by a supervising officer within one week and the proportion of people subject to a probation order who were reported to the court for breach of probation during the year.

What the indicator reports

The first part of this indicator provides information about the volume of community service work undertaken, while the second part measures the efficiency of the service, showing how quickly criminal justice services are helping to complete their orders.

Points to bear in mind

Community service tends to be more effective the shorter the time required to complete the hours ordered by the court

Social work

Social Work	Indicator 1
