## Refuse collection

1. **The net cost of refuse:**
  - a) **collection (combined domestic commercial and domestic bulky uplift) per premise**
  - b) **disposal per premise.**

### ***What the indicator reports***

This indicator shows how much it costs each council to collect and dispose of refuse.

The indicator reports the cost of collecting refuse from dwellings and commercial premises (eg shops), including the cost of special collections of bulky items of refuse (eg furniture, carpets and kitchen equipment).

Refuse disposal includes any treatment of waste collected by the council and destined for final disposal in landfill. It includes sorting, compacting, baling, shredding, composting, recycling and incineration. The operation of transfer-loading stations and the provision of civic amenity sites or skips should be regarded as disposal.

### ***Points to bear in mind***

The cost of refuse collection will be affected by:

- the method of collection, since this influences the time taken to collect refuse from individual premises
- the frequency of uplift
- the volume of refuse to be collected
- the area over which the population is spread
- difficulties caused by traffic congestion and access problems in urban areas

Scotland's councils use the wheeled bin method of collection, which tends to reduce collection costs, particularly in areas where householders take the bins to the kerbside, thus reducing collection time for councils. The alternative methods are the uplift of static bins or sacks from either the back door of dwellings or from the kerbside.

The great majority of councils collect domestic refuse once a week, though a small number operate a twice-weekly uplift—mainly for tenement and high rise flats. Most councils undertake separate collections of other waste e.g. garden refuse, waste paper, etc. Generally, uplifts from commercial premises are carried out two or three times a week.

No charge is made for the normal domestic refuse collection service, although some councils now charge for special uplifts of bulky domestic refuse.

Some councils have access to existing landfill sites which although unable to meet the standards prescribed by European legislation, have sufficient remaining capacity to provide lower disposal costs. There is every possibility that in the future, when new, more expensive sites are required, costs will rise.

# Waste Management

---

## Special Uplifts

- 2. The percentage of special uplifts for bulky domestic refuse completed within 5 working days.**

### *What the indicator reports*

A 'special uplift' service is a service for the collection of bulky household refuse which would not normally be removed as part of the routine collection service. The indicator shows the proportion completed within 5 days of the council receiving the request.

### *Points to bear in mind*

Each council sets its own target response time expressed as the number of working days between a request being received by the council and the uplift being completed. The proportion completed within 5 working days allows comparison across all councils.

## Refuse collection complaints

- 3. The number of complaints per 1,000 households regarding the household waste collection service**

### *What the indicator reports*

This indicator shows the recorded incidence of complaints to the council arising from its refuse collection service. These may be due to missed collections or other matters such as spillage of refuse or complaints about an operative's attitude.

### *Points to bear in mind*

Complaints may arise from a number of causes. However it is recognised that for a service such as refuse collection, they can be seen as a direct measure of the extent to which householders express dissatisfaction with the service they receive.

Some councils rely on contractors to provide this information, and it is their responsibility, as the client, to ensure that all missed collections are recorded by the contractor.

## Refuse Recycling

- 4. The amount of waste collected by the authority during the year that was disposed of by the following methods:**

Method	Tonnes per household	%	Tonnes per commercial and industrial premise	%
Used for recovery of heat, power and other energy sources				
Composted by the authority				
Other recycling methods				
Landfill				
Other disposal methods				
Total		100%		100%
	Domestic		Commercial and industrial	
Total tonnage collected				

### *What the indicator reports*

This indicator shows the methods adopted by councils for disposing of household, commercial and industrial waste, and the percentage of waste per household, and commercial and industrial premise disposed of by different methods.

# Waste Management

---

The indicator also shows each council's estimate of its achievement in recycling waste. Councils obtain waste material for recycling in three ways - through collections at recycling centres (eg bottle banks, paper banks), by separate house-to-house collection of recyclable materials, or by separating waste after collection.

The government has set councils the target of recycling 25% of household waste by the year 2000. A European Commission (EC) directive has set new targets for the amount of biodegradable waste that goes to landfill sites and the first of these targets is that by 2006 the amount of waste going to landfill must be reduced to three quarters of the 1995 level.

## ***Points to bear in mind***

As a consequence of the EC directive, councils will require to find alternative methods of disposing of refuse, and recycling will become an even higher priority.

The key factors under the control of a council for recycling are its expenditure on promotional campaigns and collection, and its investment in a recycling plant.

The major external factors that have a significant impact upon recycling levels are:

- the level of public awareness of the value of recycling
- the willingness of the public to participate in recycling household waste
- fluctuations in market demand for recycled materials.
