

Roads and lighting

Carriageway condition

1: The percentage of the road network that should be considered for maintenance treatment.

What the indicator reports

This indicator shows the percentage of the road network that should be considered for maintenance treatment.

The indicator is based on agreed United Kingdom current best practice derived to suit Scottish conditions. In particular it considers road texture, rutting cracks and road profile, measured against nationally applied quality thresholds.

Points to bear in mind

'Considered for maintenance treatment' means that there is likely to be some defect in the condition of the road, but the council must consider any work in the context of its planned programme of repairs, the impact on spending provision, user delays and safety concerns.

The condition of roads will be affected by:

- budgetary constraints
- traffic flows/usage
- weather patterns

Traffic light repairs

2: Traffic light failure: percentage of repairs completed within 48 hours.

What the indicator reports

The indicator reports the percentage of repairs by councils completed within 48 hours. The actual repair work may be carried out by a private contractor.

Points to bear in mind

Councils' targets for repair times may be expressed in working hours, and so may exclude weekends and night time (eg a target of '24 hours' may comprise three 8-hour working days).

Street lighting

3: Street lights failure: the percentage of repairs completed within 7 days

What the indicator reports

The indicator reports the percentage of repairs that were completed within 7 days.

4: The proportion of street lighting columns that are over 30 years old

What the indicator reports

This indicator shows the proportion of a council's street lighting columns that are over 30 years old – the accepted industry-wide period over which columns, at present, need replaced.

Points to bear in mind

Not all types of columns will need to be replaced at 30 years. Certain types of columns will last significantly longer. However, overall, the indicator will show comparison across councils and also the extent to which councils are adequately funding the replacement of older columns.

Roads and Lighting

Bridges – Road Network Restrictions

5: As a percentage of the total number of assessed bridges, the number of council and private bridges that:

- **fail to meet the European Standard of 40 tonnes**
- **have a weight or width restriction placed on them**

What the indicator reports

The indicator shows the proportion of an authority's bridges that have failed to meet the European standard. This part of the indicator is a measure of the Councils weak bridges.

The indicator also shows the proportion of bridges that have resulted in road network restrictions and therefore impinge on free traffic flow across the roads network.

Points to bear in mind

Councils with a high percentage of bridges that fail the standard are likely to experience restrictions on their network in the future unless sufficient investment is made to bring them up to an acceptable standard.

The indicator includes both council and private bridges. A council may have less influence over private bridges
